1  [
2    {
3      "Error Code": "0001",
4      "Module Name": "PiLogErr.c",
5      "Text Message": "A software failure (new assertion) has occurred. There is no known
hardware fault that could cause this."
6    },
7    {
8      "Error Code": "0002",
9      "Module Name": "bCommonFormat.c",
10     "Text Message": "FEC alert message - The front end has stopped scanning because of
some power monitor problem. This could be a hardware problem with the scanhead, the channel
boards, the AIM, or the power supplies, but this also could be a system software problem. In
reviewing the previous error messages, from the FEC, the board errorID should indicate if
there is a specific problem with hardware."
11   },
12   {
13     "Error Code": "0003",
14     "Module Name": "bCommon.c",
15     "Text Message": "Hardware configuration was incorrect for the board specified in the
error message. Most likely this is a board configuration problem - either the hard coded
bits or the Eeprom is bad. This could also be a communications or software problem."
16   },
17   {
18     "Error Code": "0004",
19     "Module Name": "CmoduleLoader.c",
20     "Text Message": "This prevents the user from using the machine after flash files
were reloaded - it only requires a system reboot."
21   },
22   {
